LETTER OF TRANSMITTAL

War Department,
Army Medical Library,
June 15, 1938.

Major General Charles R. Reynolds,
The Surgeon General, United States Army.

General:

I have the honor to report the completion of the Third Volume of the Fourth Series of the Index-Catalogue of the Library of the Surgeon General's Office. The present work includes all references to literature catalogued under the letter *C* during the last 15 years, and has in addition a provisional reference list of Congresses and Conferences, medical and nonmedical, national and international, thus forming a volume of 1,350 pages.

The following table shows the number of titles in the Index Catalogue, as far as published:

	Author titles	Subject titles	
		Books	Journal articles
First Series (16 volumes)	176,364	168,537	511,112
Second Series (21 volumes)	169,812	136,405	645,557
Third Series (10 volumes)	88,876	57,034	603,600
Fourth Series, Volume One	2,779	4,454	71,168
Fourth Series, Volume Two	8,892	3,631	79,874
Fourth Series, Volume Three	4,281	4,302	77,479
Total to date	451,004	374,363	1,988,790

In years past various policies as to the size of the books composing a series have been followed. Individual volumes have varied from 457 to 1,477 pages, and have contained references catalogued under a single alphabetical letter, a letter and a fraction of a second, and even as many as four letters. It seems desirable to maintain a uniform rate of progress if possible, and under the present allowance of personnel and the present facilities for printing, which necessarily have certain limits, it is possible to print approximately 90,000 references in what may be termed a standard volume of about 1,100 pages. This necessitates the preparation, editing, printing, and proofreading of nearly 2,000 reference cards each week.

Since there are many unavoidable delays in printing and assembling cards due to illnesses and absences of personnel, while theoretically it is possible to complete a standard size volume in 10 months, a full year is estimated as the time necessary in the average case. It is probable therefore that for some years to come the successive volumes of the Index-Catalogue will appear about the first of July. In the present book a slight change in type has been made, which it is hoped will lessen the strain on the eyes of the reader.

The Library now contains approximately 405,000 volumes, 365,000 pamphlets of all sorts including letters and broadsides, and as nearly as can be ascertained 185,000 theses. Very little shelf space remains and corridors have been encroached upon. Including duplicates it is quite likely that there are as many as one million individual items here. During the year new shelving has been added to the limit of capacity, the incunabula have been placed in one closed case, and the work of bringing the 16th century authors together has begun.

A considerable number of rare books were purchased since the publication of Volume 2 of the 4th Series, including many 16th and 17th century works. Already accessioned are two works of Francisco Franco on the use of snow and on contagious diseases (Sevilla, 1569), the treatise of Alonso Diez Daça on dangers of drinking water (Sevilla, 1576), an anonymous discussion on treatment of smallpox (Sevilla, 1583), two Spanish medical manuscripts written by Luis Antonio Piñon, a Mexican Jesuit, in 1712, another 18th century medical manuscript in Spanish written by Franciscan friars in Toluca, Mexico, and the three books of the Posoni Kert (Nagyszombat & Bécs, 1664–67), an early treatise on botanical gardens written by the Jesuit János Lippay.

Due to the increased appropriation in the present year the Library has been able to add a number of journals to its list. Approximately 2,211 books have been purchased, including 86 which may be classified as rare works. In order to increase the usefulness of the Library in the matter of book loans, a list of recent book acquisitions has been mailed quarterly to medical libraries, Army and Navy hospitals and officials of the Public Health Service, etc. This has proved of benefit to the patrons of the Library. The list of journals currently received will continue to be brought up to date and will be issued annually as in past years. If possible a list of 16th century authors will be added as a supplement to Volume 4, 4th Series,

Very respectfully,

Harold W. Jones,
Colonel, Medical Corps, United States Army,
The Librarian, Army Medical Library.

SECOND SUPPLEMENT

FOURTH SERIES

INDEX-CATALOGUE

The following supplement of the Index-Catalogue lists, for the most part, meetings which are commonly known as congresses or conferences and which have been of a more general character than sessions of organized societies with a limited membership. Society meetings as a rule have been omitted in compiling the present list although they will eventually be published in a special Catalogue of Societies.

The list of congresses consists of two parts: (*a*) The list proper, in which the congresses are arranged and numbered under suitable English catchwords and geographical words; (*b*) an exhaustive alphabetical index containing full and analytical titles of the congresses and their subjects.

The list as printed does not pretend to be either comprehensive or complete. It is a tentative or preliminary arrangement of material and information available in the Army Medical Library. Approximately 1,700 individual congresses are included of which a fair share is medical or of medical interest. The number of local, national, and international congresses is legion, and only after many years' intensive research will it be possible to unearth them from the back numbers of special journals and magazines. Many independent meetings were held during the last hundred years in the various countries of the world, but only a minority escaped oblivion. The difficulty of collecting all congresses and of compiling a comprehensive bibliographical list is best illustrated by a remark of Mme. Morsier (Bull. continent., 1892, 17:45) who asserts that from 1870 to 1881 there were held in England 766 public meetings and 91 conferences on the subject of the regulation of prostitution alone.

Since many congresses failed to publish reports, and this library often failed to secure reports that were published, information in the case of an individual congress is often fragmentary. Sometimes, not even the native title of the congress could be ascertained. Wherever possible, however, the following data are given:

(1) Title of the congress in the vernacular, or in English (especially for international congresses);
(2) Variations of the title; foreign titles of international congresses;
(3) Historical notes on the organization of the congress, its connection with societies, its commissions, and meetings of the commissions;
(4) Chronological sequence of the periodical meeting, number of sessions, place, month and day;
(5) Official and private publications for each session;
(6) References to journals which contain announcements, or abstracts of reports;
(7) Topics of each session.

To insure reliability, the following symbols were freely used: (*a*) Parentheses () denote lack of information, or show that the publication of the congress had no special title. (*b*) Question mark ? shows uncertainty of the detailed information in place of which, or after which, it occurs. (*c*) Asterisk * indicates that a publication is in the possession of the Army Medical Library.

The publication of the present list of congresses is part of a greater project undertaken by this library with the primary purpose of recognizing the gaps in the files of its books and periodical publications. The list of congresses is, therefore, also a list of wanted publications. Similar lists are in preparation for sixteenth, seventeenth, and eighteenth century medical authors, for medical institutes, periodicals, schools, and societies. The publication of a list of congresses is appropriate in the C volume of the Index-Catalogue, where it is most certain to be looked for.

The information contained in this supplement was collected during the last few years from various sources. Previous volumes of the Index-Catalogue, national bibliographies, medical periodicals, trade catalogs, and the congress publications themselves were the chief sources of information. The work of P. H. Eijkman (Internationalisme scientifique. La Haye, 1911) and the World List of Scientific Periodicals (2. ed. Oxford, 1934) were also consulted, but unfortunately both are incomplete. None of them contains the national congresses, and none of them lists the congress publications or journal references to the meetings. The recent pamphlet of H. J. Haferkamp (Die internationalen medizinischen Kongresse und der Weltkrieg. Berl., 1937) is very fragmentary, is not a bibliographical list, and has been compiled chiefly for other purpose. Nijhoff's trade catalog No 602 was very useful in supplementing lacking details.

As it is now, the List of Congresses of the Index-Catalogue is the first attempt of a combined historical and bibliographical catalog of national and international congresses. It is also the first bibliography of medical congresses.

Many congresses not strictly medical were included, either because they had much to do with general hygiene and sanitation, or because their knowledge is important for the identification of congresses. Many congresses and conferences are confused with each other, in part because their titles are almost identical or their subject is the same, and in part because new sets of congresses were often started under old flags. It is also very common to confuse international committee meetings or conferences with congresses bearing the same title.

A very misleading error is to give the date of publication of a report for the date of the congress, since several years may have elapsed between the meeting and the publishing of the transactions.

The study of congresses is very fascinating. Being the meeting-ground of many usually like-minded persons, they are reflections of the scientific, social, religious, or political life of larger units of mankind. By their purpose and resolutions they show the problems and nuisances, the helplessness and adroitness, the scientific and technical achievements, the morality and whole culture of provinces, states, countries, nations, continents. By their postponements or disorganization they show the effects upon society of such unaccountable factors as war, economic depressions, political and religious persecutions, indifference, and so on.

The gatherings of individuals have been given various such **names** as, assembly, conference, congress, convention, debate, discussion, enquête, Generalversammlung, gyülés, hét, jornada, journée, Kongress, meeting, naggyülés, nagyhét, symposium, synode, Tagung, Week, Woche, etc., all of which are more or less synonymous, except that some of these titles imply that the meetings were more on the order of private ones, meetings perhaps of smaller groups of specially invited persons or delegates. In the English language, both terms conference and congress may mean also an organized society or association.

According to the **geographical** limit of membership, congresses may be municipal, regional, provincial, state, national, interurban, interregional, interprovincial, interstate, international, All-American, All-India, All-Russian (Vserossiisky, Vsesoiuny), Panamerican, Paneuropean, Panpacific, Far East, World, etc., congresses.

The **subject** of a congress may be any human knowledge, activity, desire, or evil. Most professions and most specialties of science have had their regular, or occasional, national or international meetings.

The **title** of a congress includes usually a generic term, a geographical adjective, and a noun or adjective showing the subject of meeting or the specialists who meet. There is a general tendency toward specialization in selecting the subject and title of congresses. Older congresses of a more general character such as the International Congress of Medicine gradually came to be subdivided into many sections, until finally the sections developed into individual congresses.

Many had to do with the specialization, with beginning internationalism, which movement reached its earliest peak in the first decade of the 20th century, and the next one after the World War owing to the many new problems of the postwar period and the activities of the League of Nations.

During the 19th century congresses were **initiated** by private individuals, editorial staffs of journals, municipal, state or federal governments, and subsequent meetings were organized by a permanent committee. In the 20th century, it became very common to combine the functions of a congress with the activities of societies. Nowadays, first sessions of congresses usually create national or international societies, which then are charged with the work of organization of subsequent sessions, and the editorial work of occasional publications.

The **frequency of meetings** differs greatly. Most congresses, however, meet at regular 3–4-year intervals. Some national congresses meet annually; some international congresses hold their meetings every 5 years. The United States Pharmacopoeial Convention meets every 10 years. As a rule, the longer the interval between the periodical meetings, the more difficult it is to save a congress from disorganization.

The **seasons**, the months, sometimes even the days, of subsequent meetings are characteristic for many congresses. Many sessions of the International Congress on Alcoholism were held between

late August and early September. The choice of date depends partly on the country of the meeting. In general, the season for congresses is from late spring to early fall.

The **duration** of a session varies according to the size of the congress. The average number of days in session is from 2 to 3 for national, from 4 to 7 for international meetings. There were many 1-day congresses, and a few which remained in session for several months.

The **place of meeting** may be the same for all subsequent sessions, or the congress may wander from place to place, from country to country, this being the accepted custom for all international assemblies. The place is selected so that at the time of the meeting there may be other events in a particular city or country for the attraction of the congress members (international expositions, festivals, etc.).

The activities of a congress are numerous, including the work of the permanent or temporary organization committee, preliminary conferences, the work of different sections and commissions, and the work of delegates and individual participants. The congress **publications,** therefore, vary in great degree. They are official and nonofficial, published in advance, or during and after the congress. Often they will appear in several languages.

(a) *Publications before the congress:* Announcement; Conférence préparatoire; Convocatorio; Exposition; Guide book; Invitation; Livre d'or; Organization; Preliminary reports; Programme; Réglement; memorial volumes by special titles;

(b) *Publications during the congress:* Bulletin; Tageblatt;

(c) *Publications after the congress:* Actas; Actes; Amtlicher Bericht; Atti (ufficiali); Bericht (stenographischer); Bericht über die Verhandlungen; Communications; Compte rendu (sténographique; in extenso); Comptes rendus; Conclusions; Deliberationes; Denkschriften; Diskussionen; Documents; Generalbericht; Gutachten; Handelingen; Jegyzökönyv; Mémoires; Minutes; Procès-verbaux; Proceedings; Protokoll; Publications scientifiques; Rapports; Recueil des travaux; Report; Reports of proceedings; Resolutions; Résumés des discours; Schriften; Summary; Sunti; Trabajos; Transactions; Travaux; Trudy; Verhandlungen; Verslag; Voeux, etc.

The private publications are reports of delegates, journal articles and summaries. Sometimes, the main title of the congress publication is just a common book-title for the great annoyance of librarians.

It is evident from the great variety of publications and from the great variations of the title of an individual congress that the old-fashioned cataloging of congress publications is entirely unsatisfactory. They cannot be cataloged under the title of the publication as has often been the practice in certain libraries; nor under the name of the city where the session was held; nor one session as "Congrès international," another as "International congress," and a third perhaps as "Congressus internationalis." The practice of the Army Medical Library will be in the future to catalog congresses under geographical adjectives or nouns which occur in their titles, national congresses being entered under the name of the country, and international congresses under the English word "International," which is put into brackets when the title of the international congress is in a foreign language.

1299 PSYCHOTHERAPY INTERNATIONAL

International medical congress for psychotherapy (1926–)

1.–8. Allgemeiner ärztlicher Kongress für Psychotherapie.

Organized in 1926 by W. Eliasberg (München) and other neurologists with the scope of applying the results of medical psychology in all branches of medicine, and of making harmony in the divergent opinions of recently developed psychological schools.

The 2. congress founded the Allgemeine ärztliche Gesellschaft für Psychotherapie, which organized further congresses; originally a German society with international membership sponsored by Sommer, Eliasberg, Kretschmer, Cimbal and C. G. Jung. In 1933, the society became international with the aim of excluding Jewish psychology, and the group of German psychotherapists separated and founded a national Deutsche Gesellschaft für Psychotherapie upon national socialistic basis.
